

Reliable Direct Contact Temperature Sensing

OSENSA's medium voltage fiber optic temperature sensors install on switchgear contacts, bus bars, cast resin transformer, motor, and generator windings to provide reliable 24/7 thermal monitoring with noise-free performance. The probes are constructed from durable, high dielectric strength materials and have been tested to safely operate on equipment rated up to 38 kV (3 phase). They install quickly and can be ordered with optional probe-tip attachments suitable for various applications.
